

User manual Printer configuration GNU/Linux

Valid only for the building C1
Campus Nord UPC

First of all ...

... **make sure your user is in admin or sudoers group. Otherwise** create a ticket for Systems from <https://tickets.cimne.upc.edu> or send an email to cau@cimne.upc.edu.

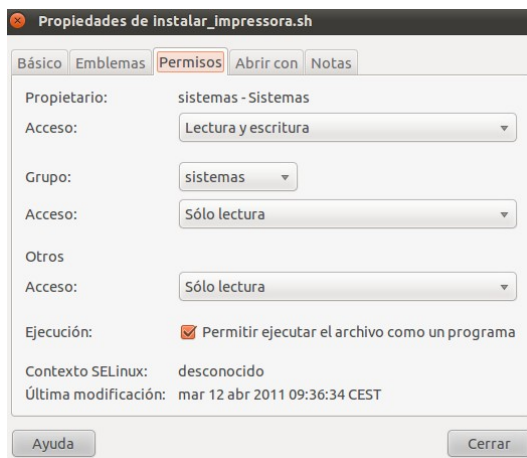

In addition you have to have a user code provided by Maria Rotger (C1 103 Office) if you are on the first floor or María Jesús Samper (Publications) if you are on the second.

Printer setup

1) Download the next script:

https://web.cimne.upc.edu/groups/sistemas/Impresoras/Barcelona/instalar_impresora.sh

2) From the Nautilus file manager go to where you downloaded the script and right click on it then left click on "Properties." Click on the tab "Permissions" and check the box to allow the execution of a program file as shown in the image below:

3) Close the properties and double click on the script. Click "Run" and follow the instructions of the script.

The printer you have to install depends on the floor where you are: first floor (C1-P1) or second floor (C1-P2).

*** It is important to note that if your user has the restriction of printing in black and white only need to change this option when you print it or leave it enabled by default.**

**** By default, the printing settings are: black and white and two sided.**

Note: we have detected that when using Ubuntu 20.04 the original script `instalar_impresora.sh` won't work. There is now a fix if you execute `instalar_impresora_ubuntu_20.sh` instead.
